

Our coop is interested in your used fryer oil. We will process it into biodiesel for local use. Biodiesel is an environmentally friendly sustainable diesel fuel replacement. Our goal is to reduce Iowa's dependence on foreign oil while keeping your energy dollars in the local economy. We will work with you to lower your disposal costs and develop a removal system that makes your job easier. We will provide you with a dumpster or appropriate containers and remove them in a timely fashion. In return we request that you keep all water and as much debris as possible out of the containers. In that we live in the area, we are available to quickly help with any issues that arise. We believe that by helping us, you present to the community an image of proactive involvement in recycling and energy conservation. If you wish we will promote your business in our materials and the media. If you have any questions or are ready to sign up call Steve Fugate at 319-683-2892 in the evenings or 337-5512 during the day.
